Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/clone_libe_Entramoba histolytica Sheared DNA"
/note="Vector: pHOS1; Site_1: Bst I; Constructed at The
Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila and managester BAC library was prepared by Kazucoyo Goegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCL-98 and was constructed by partial EcoxI digestion of Drosophila DNA provided by the BDGP From the BDGP's and BSGP in and EST libraries. A more detailed description of the library
              G.G., and Diamond, L.S. (1993) Entamoba histolytica: a method for isolate identification. Exp. Parasitol. 7:450.) The DNA was mechanically sheared to give a fight size distribution (-2 kb). The v + i method used for the library construction is described in detail in Smith, Ho. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."

Clones are derived from the Entamocha histolytica HM:IMSS sheared
DNA library
Seq primer: M13-Forward
Class is shotgun
High quality sequence start: 26
High quality sequence start: 36
Llocation/Qualifiers
                                                                        DNA linear GSS 14-NOV-2000

- Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazuctoyo Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the loggenic strain y2; co bw may by, the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

AL Submitted (02-UNN-1999) Genoscope - Centre National de Sequencage :

- Web : www.genoscope.cns.fr)

- Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information melanogaster genome using these BACs. For further information melanogaster pack is prepared by Kazutoyo Geoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of NY. The library us prepared by Kazutoyo Geoegawa and Cancer Genetics at the Roswall Park Cancer Institute in Buffalo, Cancer Genetics at the Roswall Park Cancer Institute in Buffalo, BCSKI digestion of Drosophila DNA provided by the BDGP from the BOGP is and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be Location/Qualiflers

/note="Vector: pHOS1; Site=1: BSE 1; Constructed at The
Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of B. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

//note="Wector: pAD-GAL4; At 20-25% parasitemia, blood was collected from BALB-GByJ mice infected with Py17XL parasites, and leukcoytes removed by passage over microcrystalline cellulose collumns. Total RNA was month solated using the guandidinium isothiocyanate method, and First strand cDNA synthesis was completed using a 50-base primer and reverse transcriptase in the presence of 5-methyl dcTP. After second strand synthesis, uneven stamply dcTP. After second strand synthesis, uneven adaptors ligated to the blunt ends The sample was cleaved with KNoI and separated on a Sephacryl S-500 column. Size-fractionated cDNA mas precipitated to the blunt ends The sample was cleaved Size-fractionated cDNA was precipitated to HybrizAP arms directionally using EcoR-XhoI cleaved arms. exclsed from the HybriZAP vector (pAD-GAL4) was exclsed from the HybriZAP vector and plasmid DNA was read and plasmid DNA was precipitated to the high and separated and ligated to After packaging, the phagemid vector (pAD-GAL4) was

ALIGNMENTS

RESULT 1

The present sequence represents CrylBf, an insecticidal protein derived from Bacillus thuringiensis. The specification also describes CrylJd and CryPRa. The Cry proteins have activity against lepidopteran and coleopteran insect pests. CrylBf, CrylJd and Cry9Fa polynucleotides and polypeptides are useful for obtaining a plant with resistance to insects. Cry polynucleotides are useful for producing transgenic plants which are resistant to insects. CrylBf; insecticidal protein; CrylJd; Cry9Fa; lepidoptera; coleoptera; insect pest; transgenic plant. Novel insecticidal proteins CrylJd, Cry9Fa and CrylBf, derived from Bacillus thuringiensis, useful for controlling insects in plants. Van Rie J; Arnaut G, Boets A, Damme N, Mathieu E, Vanneste S, Amino acid sequence of a CrylBf insecticidal protein. AAB84628 standard; protein; 1228 AA Claim 11; Page 37-41; 65pp; English. 2001-281518/29. N-PSDB; AAS02482 Lepidopteran-active Bacillus thuringiensis delta-endotoxin polypeptides and the polynucleotides that encode them, useful for increasing the insect resistance of plant.

Claim 5; Page 139-141; 173pp; English.

The sequence represents a B. thuringiensis Lepidopteran-active delta-endotoxin, crystal protein CryBT64. The Lepidopteran-active B. thuringiensis delta-endotoxin polypeptides may be used as compositions that are applied to plant crops to protect them from insect damage. The polymorleotides may be used in the production of transgenic plants that express the insecticidal polypeptides and consequently have improved insect resistance compared to non-transformed plants. Monocotyledonous or dicotyledonous plants may be protected in this way, for example corn, tobacco, kapok, flax, potato, barley, turf grass, pagture grass, berry, truit, lagime, vegetable, ornamental plant, shrub, cactus and/or tree fruit, lagime, vegetable, ornamental plant, shrub, cactus and/or tree cell. A wide range of insects (e.g gypsy moth, looper, tobacco budworm, cotton leaf perforator and spruce budworm) may be affected by application of the insecticidal polypeptides (full details given in specification)

The present invention describes isolated nucleic acid sequences encoding toxins active against lepidopteran insects. The present invention also describes a recombinant host transformed with a nucleic acid sequence encoding a toxin. The nucleic acid sequence can be amplified. The product is used for producing transgento plants resistant to attack by lepidopteran pests. N.B. The numbers in the sequence listing do not correspond to the SEQ ID NO:'s mentioned in the specification e.g. in the specification SEQ ID NO:'s mentioned in the specification e.g. in the nucleic acid sequences encoding the toxins, and SEQ ID NO:7, 8, 9 and 10 are said to correspond to the amino acid sequences of the toxins, whereas in the sequence listing the amino acid sequence is given after the nucleic acid sequence encoding it (i.e. SEQ ID NO:3 encodes SEQ ID NO:4)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

```
The present sequence is that of the C-terminal region of novel delta-endotoxin 1582Cc of Bacillus thuringiensis (B.t.) isolate PS158C2 (NRRL B-18872). The amino acid sequence is predicted from a partial gene sequence for 1582Cc (See AAA82222) obtained from a PS15BC2 gene library. The invention provides novel B.t. delta-endotoxins 1582Ca-d (see AAB1994.7-50), which are active against leplodpteran pests. Expression of the delta-endotoxins in transformed plants confers resistance to these insect pests, while transformed microorganisms can be applied to sites where they will proliferate and be ingested by the pest
                                                                                                                                                                                                                                                                                                                                                                                           New genes isolated from Bacillus thuringiensis which encode toxins against lepidopteran insects and which can be used to transform various hosts to express the B.t. toxin and confer insect resistance.

The sequence represents B. thuringiensis Lepidopteran-active delta-endotoxin, crystal protein CryBT54. The Lepidopteran-active B. thuringiensis delta-endotoxin polypeptides may be used as compositions that are applied to plant crops to protect them from insect damage. The cypress the insect damage. The polynucleotides may be used in the production of transgenic plants that express the insectical polypeptides and consequently have improved insect resistance compared to non-transformed plants. Monocotyledonous or dicotyledonous plants may be protected in this way, for example corn, what, soybean, oat, cotton, rice, rye, sorghum, sugarcane, tomato, ctobacco, kapek, flax, potato, barley, turf grass, pasture grass, berry, fruit, legume, vegetable, ornamental plant, shrub, cactus and/or tree cell. A wide range of insects (e.g. gypsy moth, looper, tobacco budworm, cotton leaf perforator and spruce budworm) may be affected by application of the insecticidal polypeptides (full details given in specification).

Cotton leaf perforator and spruce budworm) may be affected by application cotton leaf perforator and spruce activated and spruce assigned explicitly in the specification, cryETS number assigned to any Seq.1D number, the indexer has matched the spare sequence cotton least assigned to any Seq.1D number, the indexer has matched the spare sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Delta endotoxin; Lepidopteran-active; crystal protein; insecticide; transgenic plant; corn; wheat; soybean; oat; cotton; rice; rye; sorghum; sugarcane; tomato; tobaco; kapok; flax; potato; barley; turf grass; pasture grass; berry; fruit; legume; vegetable; ornamental plant; shrub; cactus; tree cell; gypsy moth; looper; tobacco budworm; spruce budworm; cotton leaf perforator; CryET54.

The CryIB toxin gene (disclosed in EP-408403) has been found to be toxic to the European corn borer (Ostrinca nubilalis). The use of CryIB insecticidal crystal protein for protecting crops against O.nubilalis is claimed. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NIAGRILGVLGVPFAGQIASFYSFLVGELWPRGRDQWEIFLEHVEQLINQQITENARNTA 120

This sequence represents a chimeric insecticidal protein, termed hyFLIB, that is composed of a crylB core N-terminal toxin portion of 845 amino acids and a crylA(b) C-terminal protoxin portion of 382 amino acids. The crylB and crylA(b) portions of the synthetic gene (see AAZ20086) encoding HyFLIB were derived from Bacillus thuringiensis with codon usage altered to increase expression in plants, particularly maize. When the chimeric insecticidal protein gene is expressed in transgenic maize from both PEPC and pith promoters, insecticidal activity is observed against Buropean corn borer (Ostrinia mubilalis). Recombinant microbial strains transformed with the hyFLIB gene can be used in endotmocidal formulations for the biological control of Lepidopteran pests
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                115
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                      B. thuringlensis strain EG5847 exhibits insecticidal activity against lepidopteran insects. Two novel toxin genes from B. thuringlensis EG5847 designated cryET4 and cryET5 produce insecticidal proteins with activity against a broad spectrum of lepidopteran insects. The gene sequences are given in AAQ64111-12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  360

This sequence represents the cryETS protein of Bacillus thuringiensis

(B.t.) isolate EG5847. B.t. produces inclusions during sporulation which
include insecticidal crystal proteins (TCP). ICP toxins are active in
the circled elisecticidal crystal proteins (TCP). ICP toxins are active in
the midgut cells, resulting in cessation of feeding, and eventually
the CryI proteins produced by B.t. are active against lepidopteran
consects. This protein, and the CryET4 protein (see AMM17700) belong to
the CryI family of ICPs. The DNA encoding this sequence can be used to
consects which are useful as insecticides against a wide range
consecuency of lepidopteran peets, and can be applied to crops, soil and seeds. This
protein, or especially its toxic N terminal region, can be expressed in
consecuency provide protection against lepidopteran peets. The gene
concoding this sequence, or its fragments, can also be used to isolate
concoding this sequence. (Updated on 25-MAR-2003 to correct PF field.)

CryET5; CryETS.

AAW17699;

'n,

```
The present sequence represents a CryETS protein. The protein is isolated from a new strain of Bacillus thuringiensis (B.t.), strain EG5847 (NRRL B -21110). EG5847 contains two new crystal toxin genes (cryET4 and cryET5) that produce proteins active against Lepidoptera. CryET4 is more active than CryIA(a) against Helicoverpa zea, resistant-strains of Plutella active than CryIB against S. frugiperda, while CryET5 is more active than CryIB against S. frugiperda and Trichoplusia ni (and both are active against additional insect species)

The invention may be useful for the production of pesticides whilst the disclosed sequences may be used for gene therapy. The polynucleotide sequence and methods are useful in the control of lepidopteran insect pests, and for producing transgenic plants with the ability to resist insect infestations. The invention provides polynucleotide sequences with enhanced, improved and optimised expression in menocot and dicot plant species. The present sequence is that of the (partial) B thuringiensis crylBb protein which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotide sequence optimized for expression of an insecticidal protein in a plant, useful in the control of Lepidoptera insect pests, and for producing transgenic plants with the ability to resist insect

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel polymucleotide sequence optimised for expression of an insecticidal protein in a plant. The invention may be useful for the production of pesticides whilst the disclosed sequences may be used for gene therapy. The polymucleotide sequence and methods are useful in the control of lepidopteran insect pests, and for producing transgenic plants with the ability to resist insect infestations. The invention provides polymucleotide sequences with enhanced, improved and sequence is that of a B thuringiensis crylab expression cassette protein which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polynucleotide sequence optimized for expression of an insecticidal protein in a plant, useful in the control of Lepidoptera insect pests, and for producing transgenic plants with the ability to resist insect

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel polynucleotide sequence optimised for expression of an insecticidal protein in a plant. The invention may be useful for the production of pesticides whilst the disclosed sequences may be used for gene therapy. The polynucleotide sequence and methods are useful in the control of lepidopteran insect pests, and for producing transgenic plants with the ability to resist insect infestations. The invention provides polynucleotide sequences with enhanced, improved and optimised expression in menocot and dicot plant species. The present sequence is that of a B thuringiansis crylBb expression cassette protein which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           an insecticidal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotide sequence optimized for expression of an insecticida protein in a plant, useful in the control of Lepidoptera insect pests, and for producing transgenic plants with the ability to resist insect
